

IOWA Scores 2014 – 2015

The following graphs indicate the average percentage correct in the subjects of math and reading for both 2014 and 2015. The graphs compare percentages from St. Anselm Catholic School, the region, and the nation. Please note that the scores do not indicate individual student performance, they are an average for the whole class/grade level. The IOWA tests are taken in the fall, so scores pertain to skills learned mainly in the grade before (for example: the 2nd grade scores pertain mainly to skills learned in 1st grade).
